

I am a long time XM listener. Since subscribing to XM radio I no longer listen to FM or AM radio. The various music programs that XM offers its subscribers is unsurpassed by any other radio format. By providing weather and traffic information I am able to keep track of bad traffic accidents and recent weather changes while I am driving. In my business I spend a significant amount of time in my car, and these services help me no matter what city I am in. When in my boat, the weather channel helps me keep track of any weather changes that would put me and my family in danger while out boating. The combination of the music variety programming, the weather channels, traffic channels and news channels allow me to keep up with what is going on locally, state wide, national, and world wide. It is my right as a consumer and an American to say, no demand, that these services be kept on the satellite line up. Please do not remove these valuable services from the xm satellite programming as they are valuable services to all satellite radio listeners.
